

# THE COPPERWORKS CIRCLE OF SUSTAINABILITY.

## OVERVIEW

The COPPERWORKS business model has been one of sustainability from the very beginning. Our proprietary process uses 100% reclaimed copper, refines it and turns it into new copper rod and wire. By giving new life to copper, we create a circle of sustainability that lowers the environmental impact, while helping customers advance their own sustainability efforts.

### MODEL OF CIRCULARITY

4

#### REINTRODUCE

**Continuing the Circle** — We establish circularity programs with our customers to ensure the reintroduction of pre- and post-consumer copper into the manufacturing life cycle. This focus on environmentally responsible practices shows our commitment to protecting the Earth's resources and producing excellence in recycled copper products.

1

#### RECEIVE

**Protecting a Finite Resource** — Copper, known as the world's most reusable resource, can be recycled an infinite number of times. It has a higher recycling rate than any other metal. Nearly all the copper mined from the Earth remains in circulation through copper recycling. COPPERWORKS utilizes reclaimed copper for production of its copper rod and wire products.

3

#### ROLL

**The Responsible Choice** — COPPERWORKS copper rod and wire products offer the most sustainable copper solutions. They are the responsible choice for customers seeking to protect our environment while maintaining the quality of their finished products.

2

#### REFINE

**Precise Refinement** — Utilizing a proprietary refining process, COPPERWORKS recycles copper in a highly efficient, environmentally friendly way that lowers our carbon footprint. As the copper experts, we follow precise formulation and use our exclusive Q-ssurance™ Quality Control to transform reclaimed copper into high-quality copper products.

We make copper work for our customers and our planet. Contact our team of experts to learn more about the COPPERWORKS circle of sustainability and how it can give you advantages in your own environmental efforts.
